

HYPAR UMBRELLA SHADE

The Hypar Umbrella has a hyperbolic-shaped canopy. This unique shape is achieved by using two low attachment points and two high attachment points for the shade's fabric. The shade's profile is slim with fewer visual obstructions than a regular umbrella. What's more, it has a look like popular shade sails. This shade umbrella is available in our Dual Color Shade Fabric. This fabric combines two unique colored fabric yarns to create a two-tone fabric with an impressive shimmery effect.

QUICK RELEASE ELBOW MAKES WEATHER PREP A BREEZE

Wind happens... That's why we offer the Quick-Release tensioning elbow—available as an add-on for practically any shade. Snap the canopy tight in seconds, then pop it off just as fast when coastal squalls, lake-effect snow, or rowdy spring gusts roll in. Remove the fabric and our steel frames are rated to withstand wind gusts up to 150 mph!
